

UG Capstone Project Weekly Meeting Minutes

P44 - Evidence-based provenance scoring for creative digital media content

Group Formal Tag: COMP3888_M17_01_ZL

Tutor Name: Zhenlin Liu

Client Name: Alt.VFX

Group members details

(indicate if any member is doing multiple units)

No.	Student Name	Student ID	Student University	XP-Roles
1	Declan Schulz	540894767	dsch0965	Declan, Programmer
2	Hongjie Deng	540227655	hden0671	Tracker, Programmer
3	Khanh Phan	530800451	dpha0698	Tester, Programmer
4	Marsya Amanda	530344829	mama0048	Tester, Programmer
5	Nick Chen	540658848	nche0916	Customer Liaison, Programmer
6	Shuhao Zhang	540740693	szha0571	Customer Liaison, Programmer
7	William Alexander	540722172	wale0194	Doomsayer, Programmer
8	Yee Cheng Ng	540444920	yeng0449	Tester, Programmer

Attendances: *Declan Schulz, Hongjie Deng, Khanh Phan, Marsya Amanda, Nick Chen, Shuhao Zhang, William Alexander, Yee Cheng Ng*

Apologies: *N/A*

Submission Date: 20/09/2026

UG Capstone Project Weekly Meeting Minutes

Weekly Group Meeting Minutes

Time: 17/09/2026, 14:00 - 17:00

Venue: International Student Lounge

Meeting Minute Taker: Khanh Phan

Attendances: Declan Schulz, Hongjie Deng, Khanh Phan, Nick Chen, Shuhao Zhang, William Alexander, Yee Cheng Ng, Marsya Amanda

Apologies: N/A

#	Agenda Item	Description/ Comments	Decision/Action	Who?	Items for escalation
1	What has been completed?	Completed the progress report and prepared the presentation for the in-class demo. Do a practice run and prepared an additional local demonstration using Will's environment. Added/modified slides to better satisfy the presentation rubric.	Use the current report, slides and local prototype as the baseline for further development.	All members	N/A
2	What is in progress?	Make changes to the system based on client feedback. Investigating stem separation of the final audio and comparing the separated stems with submitted evidence. Beginning work on comp-sheet analysis.	Prioritise deeper investigation of stem extraction and how it can contribute to the scoring system.	All members	Clarify how the new analysis fits the original project requirements.
3	What is working well?	The architecture and overall evidence pipeline can now be demonstrated clearly. The local demo helped explain how evidence moves through the system.	Focus more on the system architecture rather than focusing heavily on UI.	All members	N/A
4	What needs improvement?	Comparing metadata and individual files may become a rabbit hole without providing strong evidence. The UI is currently less important than improving the underlying analysis. Client suggestions may also differ from the original project scope.	De-escalate UI development to low priority. Clarify the role and limitations of metadata and confirm the intended scope with the client.	All members	Client requirements may need further clarification.

UG Capstone Project Weekly Meeting Minutes

5	Reminders	Need to ask the client directly what currently meets their expectations and what should change. Manual AI disclosure also remains an area to clarify.	Prepare specific feedback questions for future client interactions and document decisions clearly.	All members	Clarification of AI disclosure expectations.
6	What needs to be completed before the next meeting?	Investigate source/stem separation tools, experiment with splitting final tracks into stems, improve how this evidence contributes to scoring, and begin comp-sheet analysis.	Build a small experiment around final-audio → stem separation → evidence comparison.	All members	Determine whether this should become a major component of the system.

Main Discussions

- Reviewed the presentation before the demo and conducted a practice run.
- Discussed running an additional local demonstration using Will's environment.
- Made final slide modifications and added content required by the marking rubric.
- Discussed how to approach the client during the demo and what question client may ask.
- Discussed how physical client demo should be recorded or documented.
- Discussed how to improve the manual AI disclosure and the limitations of metadata and file comparison.
- Agreed that UI development should currently be a lower priority than the architecture and evidence analysis.
- During the demo, the client showed particular interest in analysing the final audio through stem/source separation.
- Discussed splitting the final track into stems and comparing those stems against submitted final evidence.
- The client offered support relating to AI tools/tokens that may assist with stem separation.
- Discussed beginning further analysis of comp sheets.

Key Takeaways

- The architecture and underlying evidence pipeline should remain the main focus of the demo.
- Metadata comparison alone has limitations and could consume a lot of time without necessarily providing stronger evidence.
- Client feedback introduced a stronger interest in final-audio stem separation and comparison.
- One possible direction is to separate the final track into stems and assess whether those stems are consistent with submitted final track evidence.
- The idea that organic-produced and AI-generated music may behave differently under stem separation should currently be treated as a potential, not yet a scoring rule.
- Some of the new client suggestions may not perfectly align with the original project requirements, so the team needs to clarify the expected scope before making a major change in direction.

What Happened

UG Capstone Project Weekly Meeting Minutes

- Completed final review and practice run of the presentation.
- Presented the current architecture, evidence pipeline and prototype.
- Demonstrated the system using the local development environment.
- Received client feedback suggesting greater emphasis on analysing the final audio using stem separation.
- Discussed splitting the final song into stems and comparing the resulting components against submitted stems/evidence.
- Discussed reducing the priority of UI development.
- Identified metadata analysis as an area where the team should clearly research more on its limitations before diving deeper.
- Identified comp-sheet analysis as another area for continued development.

What's Next

- Investigate available stem/source-separation tools in more depth.
- Build a prototype workflow that takes a final audio file, separates it into stems, and compares those stems with submitted evidence.
- Determine what measurable information from this process could contribute to the evidence score.
- Test the proposed approach on both conventional and AI-generated audio before drawing conclusions about whether separation behaviour differs.
- Continue development of comp-sheet analysis.
- Document the limitations of metadata-based evidence.
- Clarify with the client whether the new stem-analysis direction is intended to supplement the existing architecture or become a major part of the final system.
- Keep UI improvements as a lower priority for now.

Weekly Tutor Meeting Minutes

Time: 14/09/2026, 5:00pm

Venue: In Tutorial

Meeting Minute Taker: Khanh Phan

Attendances: Declan Schulz, Hongjie Deng, Khanh Phan, Nick Chen, Shuhao Zhang, William Alexander, Yee Cheng Ng, Marsya Amanda

Apologies: N/A

#	Agenda Item	Description/ Comments	Decision/ Action	Who?	Items for escalation
1	What has been completed?	Progress report completed. Initial demo presentation prepared for the in-class presentation. The core prototype and scoring pipeline are ready to be demonstrated.	Use the report and current implementation as the baseline for the demo.	All members	N/A
2	What is in progress?	Preparing and refining the demo presentation, including simplifying the explanation of	Rehearse the presentation and make sure the slides demonstrate the	All members	N/A

UG Capstone Project Weekly Meeting Minutes

		the evidence pipeline and scoring dimensions.	behaviour of fd yenfchqyue.		
3	What is working well?	Project scope and system architecture are much clearer. The team now has an end-to-end prototype and a consistent explanation of the system.	Keep the demo focused on what the system can currently demonstrate rather than adding more scope.	All members	N/A
4	What needs improvement?	Presentation needs to be more client-facing and easier to understand. Some technical concepts, particularly relationships and scoring dimensions, may need clearer explanations.	Simplify slides for Thursday client meeting to confirm whether the presentation shows what the client actually wants to see.	All members	Ask client for feedback on demo priorities
5	Reminders	Client meeting on Thursday. In-class demo/presentation preparation.	Record client feedback and make demo changes.	All members	N/A
6	What needs to be completed before the next meeting?	Move from progress-report milestone into client-focused demonstration and refinement.	Prioritise improvements identified by the client and prepare for the final project scope.	All members	N/A

Main Discussions

- Completion of the progress report and current project milestone.
- Preparation and review of slides for the client demo.
- Discussion of how to explain the prototype clearly, particularly the evidence pipeline, relationships and four scoring dimensions.
- Preparation for Thursday's client meeting and questions to ask about what the client wants emphasised in the final demonstration.
- Plan to revise the presentation after receiving client feedback.

Key Takeaways

- The main prototype is sufficient for the demo; the immediate priority is communicating it clearly.
- The presentation should focus on the project's key idea: assessing the evidence behind the creative process rather than claiming to detect AI from the final audio.
- Thursday's client meeting should be used to validate whether the current demo communicates the aspects of the system that are most valuable to the client.
- Slides can then be revised based on that feedback.

What Happened

- Finalised the progress report.

UG Capstone Project Weekly Meeting Minutes

- Developed and refined the presentation slides for the class demo.
- Reviewed the current prototype and decided which parts should be demonstrated.
- Discussed how the presentation should change depending on feedback from the upcoming client meeting.

What's Next

- Present the current demo in class.
- Meet with the client on Thursday and get feedback on the prototype and presentation.

UG Capstone Project Weekly Meeting Minutes

Individual Progress Report

Name: Declan Schulz

Student ID: 540894767

Goals

- Prepare for the client demo slides and script
- Discuss feedback from the client meeting and future directions

Progress Made

- All goals achieved

Blockers to Progress/Issues

- Having time constraints due to other commitments

Individual Progress Report

Name: Hongjie Deng

Student ID: 540227655

Goals

- Create the presentation slides for client demo
- Write the summary of future work
- Discuss with the client about the potential API use

Progress Made

- Successfully created the presentation slides and arranged our group presentation
- Successfully found out some existing security issues with our program

Blockers to Progress/Issues

- We had the client demo, and the CEO of that company(not the client) wished to have more work focusing on physical analysis, especially solo take or mix check

UG Capstone Project Weekly Meeting Minutes

Individual Progress Report

Name: Khanh Phan

Student ID: 530800451

Goals

- Help finalise and prepare the presentation and demo for the in-class/client demonstration.
- Investigate further ways to analyse audio evidence, including stem separation and comp-sheet analysis.
- Gather and document client feedback to help the next development stage.

Progress Made

- All goals achieved

Blockers to Progress/Issues

- Lack of time
- Client feedback expresses a change or add-on from the original project requirements, so the expected scope still needs clarification.

Individual Progress Report

Name: Marsya Amanda

Student ID: 530344829

Goals

- Prepare and rehearse for the presentation and client demo.
- Discuss client feedback and future project direction.

Progress Made

- Successfully rehearsed and completed the client demo.
- Discussed feedback and possible future work with the team.

Blockers to Progress/Issues

- Limited time for preparation.
- Project direction needs further discussion based on client feedback.

Individual Progress Report

Name: Nick Chen

Student ID: 540658848

Goals

- Create a list of possible techniques to be used for audio forensics and extend current passes to include tests for splitting audio into stems.
- Prepare for Client demo with outline of current architecture, design choices and relevant chosen metadata.

Progress Made

- Completed preparation and presentation for client demo with complete outline of current system architecture and future add ons
- Consulted with the group about possible techniques for audio forensics, track splitting and comparison. Also had positive feedback from client and presumed interest about further pursuing audio forensics rather than focusing on metadata

Blockers to Progress/Issues

- No specific blockers but will need to carefully consider what work we want to pursue in terms of audio forensics as this could expand scope massively which would be unwise mid way through. Will come to a decision during upcoming weekly meeting with client

Individual Progress Report

Name: Shuhao Zhang

Student ID: 540740693

Goals

- Practise and prepare for the client and tutorial demos.
- Review the next step for our project

Progress Made

- Rehearsed the presentation and demo with the team.
- Improved understanding of the future work that we need to follow

Blockers to Progress/Issues

UG Capstone Project Weekly Meeting Minutes

- don't have enough time to present, quickly go through everything

Individual Progress Report

Name: William Alexander

Student ID: 540722172

Goals

- Finish integrating stem matching code
- Complete client demo

Progress Made

- achieved goals

Blockers to Progress/Issues

- Preparation for client demo slowed development progress

Individual Progress Report

Name: Yee Cheng Ng

Student ID: 540444920

Goals

- Practise and prepare for the client and tutorial demos.
- Review the system architecture and four-dimensional assessment approach.

Progress Made

- Rehearsed the presentation and demo with the team.
- Improved understanding of the system architecture and four assessment axes for presentation.

Blockers to Progress/Issues

- Some divergence between the client's technical requirements and feedback from invited industry guests, requiring further alignment on project direction.
